Chapter 1

About the AutoStore client for Fujifilm AIP

The Fujifilm AIP component allows you to capture documents from a Fujifilm device that is enabled for custom services (AIP) and send the documents to route destinations that are supported by the Workflow server.

Specific hardware and software compatibility requirements are outlined in this document. You must meet these requirements to support this client. These requirements specifically list the needs of the embedded client for Fujifilm AIP and do not include any additional requirements for other components you might use in your system.

Chapter 2

Product requirements

Product components
