# Preface

This guide describes the Dimension and Fact tables of the Kofax Reporting data warehouse. These tables store information related to Capture client activities of Kofax TotalAgility.

Users with database role kfx\_advanced\_reader only have the read access while users with database role kfx\_etl have the write access to these tables. All date and time values in the database are based on the UTC time zone.

- These are the only database tables for which direct read-only access is permitted. Find the list of Reporting tables in the following location:

```
<Kofax TotalAgility Installation Folder>\Reporting  
\KofaxTotalAgilityReportingTables_EN.pdf
```

## Related documentation

The full documentation set for Kofax TotalAgility is available at the [Product documentation page](#).

In addition to this guide, the documentation set includes the following items:

- *Kofax TotalAgility Prerequisites Guide*: Provides system requirements for installing TotalAgility, instructions for running the prerequisite utility, and a software checklist for various installation types.
- *Kofax TotalAgility Installation Guide*: Describes how to install and configure TotalAgility.
- *Kofax TotalAgility Integration Server Installation Guide*: Describes how to install Kofax Integration Server and integrate it with other products.
- *Kofax TotalAgility On-Premise Multi-Tenant Installation Guide*: Describes how to install and configure On- Premise Multi-Tenant system.
- *Kofax TotalAgility Configuration Utility Guide*: Explains how to use the Configuration Utility to update settings across various configuration files for different types of installation and deployment.
- *Kofax TotalAgility Administrator's Guide*: Provides information to the administrator on configuring and maintaining a TotalAgility installation.
- *Kofax TotalAgility Architecture Guide*: Provides an overview of the TotalAgility architecture, covering various deployments for on-premise, on-premise multi-tenancy and Azure environments.
- *Kofax TotalAgility Best Practices Guide*: Describes the best practices you must follow when using TotalAgility to improve performance, cost, maintenance, availability and security.
- *Kofax TotalAgility Features Guide*: Provides an overview of the TotalAgility features.

- *Kofax TotalAgility Migration Guide*: Provides information on TotalAgility upgrades from different versions and post upgrade configuration.
- *Kofax TotalAgility Help*: Provides details about using TotalAgility to design business jobs and cases, assign resources, create forms, integrate with external applications, and more. Access the help from the TotalAgility application by clicking the Help button.
- *Kofax TotalAgility Workspace Help*: Describes how to use the Workspace to manage activities, jobs, and resources. Access the help from the TotalAgility Workspace by clicking the Help button.
- *Kofax TotalAgility On-Premise Multi-Tenant System Help*: Describes how to create and manage tenants using the TotalAgility On-Premise Multi-Tenant system.
- *Kofax TotalAgilityWeb Capture Control Help*: Provides details on using a Web Capture control in creating multi-page documents, creating a new document in a new folder, deleting pages that have been incorrectly scanned, and more; also, describes the buttons available in a Web Capture control toolbar.
- *Kofax Analytics for TotalAgility Product Features Guide*: Provides an overview of the dashboards that help you track data through the workflow, analyze the effectiveness of the processes and resources, and address business problems.
- *Kofax TotalAgility Tables*: Describes the Kofax TotalAgility tables and fields used by Kofax Analytics for TotalAgility.
- *Migration From Kofax Products Guide*: Provides information about migrating TotalAgility files and Kofax Transformation Modules projects to TotalAgility.

## Training

Kofax offers both classroom and online training to help you make the most of your product. To learn more about training courses and schedules, visit the [Kofax Education Portal](#) on the Kofax website.

## Getting help with Kofax products

The [Kofax Knowledge Base](#) repository contains articles that are updated on a regular basis to keep you informed about Kofax products. We encourage you to use the Knowledge Base to obtain answers to your product questions.

To access the Kofax Knowledge Base:

1. Go to the [Kofax website](#) home page and select **Support**.
2. When the Support page appears, select **Customer Support > Knowledge Base**.

**Tip** The Kofax Knowledge Base is optimized for use with Google Chrome, Mozilla Firefox or Microsoft Edge.

The Kofax Knowledge Base provides:

- Powerful search capabilities to help you quickly locate the information you need.  
Type your search terms or phrase into the **Search** box, and then click the search icon.

- Product information, configuration details and documentation, including release news.  
Scroll through the Kofax Knowledge Base home page to locate a product family. Then click a product family name to view a list of related articles. Please note that some product families require a valid Kofax Portal login to view related articles.

From the Knowledge Base home page, you can:

- Access the Kofax Community (for all customers).  
Click the **Community** link at the top of the page.
- Access the Kofax Customer Portal (for eligible customers).  
Click the **Support** link at the top of the page. When the Customer & Partner Portals Overview appears, click **Log in to the Customer Portal**.
- Access the Kofax Partner Portal (for eligible partners).  
Click the **Support** link at the top of the page. When the Customer & Partner Portals Overview appears, click **Log in to the Partner Portal**.
- Access Kofax support commitments, lifecycle policies, electronic fulfillment details, and self-service tools.  
Go to the **General Support** section, click **Support Details**, and then select the appropriate tab.

## Chapter 1

# Dimension tables

Tables with names ending in \_dim are dimension tables. These tables are a kind of dictionaries that store information about workstations involved in document processing. For example, the Doc\_dim table stores all necessary reporting information related to documents processed during CEBPM activities.

Dimension tables hold categories such as date, time, user, station, and more.

The Kofax Reporting ETL (Extract/Transform/Load) agent provides content to most of the tables, whereas some tables have predefined content such as document classification status, time, and date.

## Dimension tables with predefined content

### date\_dim

This table holds calendar date values. Most fact tables have one or more foreign keys referencing this table.

The database creation script populates this table with date values from 2009-01-01 to 2015-12-31.

Icon	Name	Data Type	Max Length (Bytes)	Description
	date_key	int	4	Year * 10000 + Month * 100 + Day Example: 20150222 for February 22, 2015
	full_date	datetime	8	
	calendar_year	int	4	Example: 2015
	month_number_of_year	int	4	1-12
	ym	nvarchar(6)	12	Year and month in format of YYYYMM
	day_number_of_month	int	4	1-31
	etl_job_key	int	4	Used internally

### time\_dim

This table holds the time-of-day values with a granularity of 1 second. The database creation script populates this table. Most fact tables reference this table.

Icon	Name	Data Type	Max Length (Bytes)	Description
	time_key	int	4	Hours * 10000 + Minutes * 100 + Seconds Example: 12003515 for 12 hours, 35 minutes and 15 seconds
	hour_of_day	int	4	0 to 23
	min_of_hour	int	4	0 to 59
	second_of_min	int	4	0 to 59
	hh_mm_ss	nvarchar(8)	16	Time in format of HH:MM:SS
	full_time	datetime	8	SQL time
	etl_job_key	int	4	Used internally

## field\_recog\_status\_dim

This table holds possible Kofax Transformation Modules (KTM) field recognition status values. The field fact table and various Transformation-specific views use this table, which is populated by the database creation script.

Icon	Name	Data Type	Max Length (Bytes)	Description
	field_recog_status_key	int	4	Fixed key values: 1 = valid and correct 2 = valid and incorrect 3 = rejected and correct 4 = rejected and incorrect 5 = unknown (no validation data yet)
	field_recog_status_name	nvarchar(255)	510	Descriptive text ("valid corr" and the rest)
	valid_corr_num	int	4	Used like a bit field: 1 = field is valid and correct else 0
	valid_incorr_num	int	4	Used like a bit field: 1 = field is valid and incorrect else 0
	invalid_corr_num	int	4	Used like a bit field: 1 = field is rejected and correct else 0
	invalid_incorr_num	int	4	Used like a bit field: 1 = field is rejected and incorrect else 0
	etl_job_key	int	4	Used internally

## object\_action\_dim

This table holds descriptive text for audit actions related to batches, documents and pages. The database creation script populates this table. If application developers define new audit actions, they must add records for those actions to this table.

Icon	Name	Data Type	Max Length (Bytes)	Description
	object_action_key	int	4	Fixed keys for predefined actions
	object_action_name	nvarchar(32)	64	Short descriptive name, displayed in audit views
	object_action_descr	nvarchar(255)	510	Not used currently, always empty
	etl_job_key	int	4	Used internally

## admin\_context\_dim

This table holds context descriptions for admin actions. The database creation script populates the table with five predefined contexts (Generic, BatchClass, User, Customization, Kfs) and one generic context (Not set).

The admin audit fact table and the admin audit view refer to this dimension.

Application developers can define and use new context values, and add records to this table.

Icon	Name	Data Type	Max Length (Bytes)	Description
	admin_context_key	int	4	Unique key
	context_text	nvarchar(255)	510	Context description

## product\_dim

This table holds product IDs for reporting integrated products. The database creation script adds records for the Kofax Capture (KC), Kofax Transformation Modules (KTM), and Kofax Front Office Server (KFS) products. Some other tables (for batches, batch classes, modules, document classes, and more) reference this table to designate which product has generated the given reporting record.

If a new Kofax product is integrated with Reporting, this table must be populated with a corresponding record.

Icon	Name	Data Type	Max Length (Bytes)	Description
	product_key	int	4	Unique product ID
	product_text	nvarchar(32)	64	Short product name that must be unique. Examples: KC and KFS
	product_descr	nvarchar(255)	510	The product display name that can be shown to the users. Examples: Kofax Capture and Kofax Transformation Modules

## Dimension tables maintained by ETL agent

All dimension tables in this section hold an additional record with primary key of -1. Foreign keys with a value of -1 indicate that this information is not yet known. For example, export\_date\_key = -1 if a batch is not yet exported.

### batch\_class\_dim

The ETL agent populates this table when it finds new information about a batch class in a batch processing event (batch creation, batch session close, batch edit).

Icon	Name	Data Type	Max Length (Bytes)	Description
	batch_class_key	int	4	Unique key
	batch_class	nvarchar(255)	510	Batch class name <code>IBatchInfo.Class</code>
	batch_class_descr	nvarchar(255)	510	Batch class description <code>IBatchInfo.ClassDescription</code>
	product_key	int	4	Foreign key to <code>product_dim</code>
	dt_last_change	datetime	8	Last changed date and time (used internally)
	etl_job_key	int	4	Used internally

### station\_dim

This table holds information about KC (Kofax Capture) stations that provided information.

The natural key for this table is the combination of station name and site ID.

Icon	Name	Data Type	Max Length (Bytes)	Description
	station_key	int	4	Unique key
	station_name	nvarchar(255)	510	Station name <code>ISessionInfo.Station</code>
	site_id	int	4	Site ID <code>ISessionInfo.SiteId</code>
	station_name_site_id	nvarchar(300)	600	Natural key (used internally)
	site_name	nvarchar(255)	510	Site name <code>ISessionInfo.SiteName</code>
	dt_last_change	datetime	8	Last changed date and time (used internally)
	etl_job_key	int	4	Used internally

## mod\_dim

This table holds information about modules that provided information. It also holds entries for export connectors that were used for exporting documents.

Icon	Name	Data Type	Max Length (Bytes)	Description
	mod_key	int	4	Unique key
	mod_type	int	4	Module type 0 = normal module 2 = export connector
	mod_name	nvarchar(255)	510	Module name For normal modules: ISessionInfo.ModuleName For export connectors: ExportConnector parameter in API call ExportDocument
	mod_id	nvarchar(255)	510	Unique module ID For normal modules: ISessionInfo.ModuleId For export connectors: ExportConnector parameter in API call ExportDocument
	mod_id_type	nvarchar(300)	600	Natural key
	product_key	int	4	Foreign key to product_dim
	dt_last_change	datetime	8	Last change timestamp (used internally)
	etl_job_key	int	4	Used internally

## user\_dim

This table holds user information provided in batch sessions or admin sessions.

Icon	Name	Data Type	Max Length (Bytes)	Description
	user_key	int	4	Unique key
	user_logon_name	nvarchar(255)	510	User ID (natural key) From ISessionInfo.UserId
	user_fullname	nvarchar(255)	510	User's full name From ISessionInfo.UserName
	dt_last_change	datetime	8	Last changed timestamp (used internally)
	user_type	int	4	Foreign key user_type_dim
	etl_job_key	int	4	Used internally
	logon_name_type	nvarchar(300)	600	Used internally

## machine\_dim

This table holds the distinguished computer names of stations that provided information.

Icon	Name	Data Type	Max Length (Bytes)	Description
	machine_key	int	4	Unique key
	machine_name	nvarchar(255)	510	Computer name (including domain)
	etl_job_key	int	4	Used internally

## doc\_class\_dim

The ETL agent adds a record to this table when it encounters a new document class name in a batch close event.

Icon	Name	Data Type	Max Length (Bytes)	Description
	doc_class_key	int	4	Unique key
	doc_class	varchar(255)	510	Document class name <code>IDocument.Class</code>
	product_key	int	4	Foreign key to <code>product_dim</code>
	etl_job_key	int	4	Used internally

## group\_value\_dim

The ETL agent adds a record to this table when it encounters a new KTM group value in a batch close event.

Icon	Name	Data Type	Max Length (Bytes)	Description
	group_value_key	int	4	Unique key
	group_value	varchar(255)	510	KTM group value <code>IDocument.GroupValue</code>
	etl_job_key	int	4	Used internally

## form\_type\_dim

The ETL agent adds a record to this table when it encounters a new form type name in a batch close event.

Icon	Name	Data Type	Max Length (Bytes)	Description
	form_type_key	int	4	Unique key
	form_type	nvarchar(255)	510	Form type <code>IDocument.FormType</code>

Icon	Name	Data Type	Max Length (Bytes)	Description
	product_key	int	4	Foreign key to product_dim
	etl_job_key	int	4	Used internally

## tsf\_class\_dim

The ETL agent adds a record to this table when it encounters a new KTM class name in a batch close event.

Icon	Name	Data Type	Max Length (Bytes)	Description
	tsf_class_key	int	4	Unique key
	tsf_class	nvarchar(255)	510	KTM class name IDocument.TransformationClass
	ta_document_type_id	nvarchar(255)	510	TotalAgility document type ID
	ta_document_group_name	nvarchar(255)	510	TotalAgility document type name
	ta_document_group_version	nvarchar(255)	510	TotalAgility document group version
	ta_document_group_id	nvarchar(255)	510	TotalAgility document group ID
	ta_document_group_cat_key	bigint	510	References the category for the document group.
	class_group_version	nvarchar(768)	1536	Used internally
	product_key	int	4	Foreign key to product_dim
	dt_last_change	datetime		Time of the latest change for this record.
	etl_job_key	int	4	Used internally

## reject\_note\_dim

The ETL agent adds a record to this table when it encounters a new reject note text in a document reject or page reject event.

Icon	Name	Data Type	Max Length (Bytes)	Description
	reject_note_key	int	4	Unique key
	reject_note	nvarchar(255)	510	Reject note RejectNote parameter in the RejectDocument or RejectPage calls
	etl_job_key	int	4	Used internally

## field\_dim

This table holds all known index field and batch field names. The ETL agent updates this table when processing batch close events containing index field or batch field information.

Icon	Name	Data Type	Max Length (Bytes)	Description
	field_key	int	4	Unique key
	field_name	nvarchar(255)	510	Field name IField.Name or IBatchField.Name
	etl_job_key	int	4	Used internally

## batch\_dim

The ETL agent updates this table whenever new information about the batch arrives. This can be when the batch is created, a batch session is opened or closed, or during batch edit actions.

A time stamp on each action reported by the API guarantees for the latest information.

Icon	Name	Data Type	Max Length (Bytes)	Description
	batch_key	bigint	8	Internal unique key
	batch_name	nvarchar(255)	510	Batch name from IBatchInfo.Name
	batch_id	nvarchar(255)	510	Unique batch ID from IBatchInfo.Id
	product_key	int	4	Foreign key to product_dim
	create_date_key	int	4	Batch creation date Foreign key to date_dim
	create_time_key	int	4	Batch creation time of day Foreign key to time_dim
	export_date_key	int	4	Batch export date when Export module closes batch with status Deleted. Foreign key to date_dim
	export_time_key	int	4	Batch export time of day Foreign key to time_dim
	delete_date_key	int	4	Batch delete date when a module closes batch with status Deleted. Foreign key to date_dim
	delete_time_key	int	4	Batch delete time of day Foreign key to time_dim
	last_proc_date_key	int	4	Last processing date Foreign key to date_dim

Icon	Name	Data Type	Max Length (Bytes)	Description
	last_proc_time_key	int	4	Last processing time of date Foreign key to time_dim
	create_station_key	int	4	Station that provided batch create information. Foreign key to station_dim
	create_user_key	int	4	User from batch create event. Foreign key to user_dim
	last_proc_statio_n_key	int	4	Station that provided newest information about the batch. Foreign key to station_dim
	last_proc_user_key	int	4	User from last batch related information. Foreign key to user_dim
	last_proc_mod_key	int	4	Module from last batch related information. Foreign key to mod_dim
	dt_last_proc_datetime	datetime	8	Last processing date and time (used internally)
	next_mod_key	int	4	Not used and not populated
	batch_state	int	4	Batch status (from batch session close events)
	batch_class_key	int	4	Batch class Foreign key to batch_class_dim
	batch_priority	int	4	Batch priority from IBatchInfo.Priority
	batch_descr	nvarchar(255)	510	Batch description from IBatchInfo.Description
	is_exported	bit	1	1 if batch was exported
	is_deleted	bit	1	1 if batch was deleted
	etl_job_key	int	4	Used internally

## doc\_dim

This table holds the latest known status of each individual document. The ETL agent updates it when processing batch close events and document-related batch edit actions.

Icon	Name	Data Type	Max Length (Bytes)	Description
	doc_key	bigint	8	Unique key

Icon	Name	Data Type	Max Length (Bytes)	Description
	doc_id	nvarchar(255)	510	Natural key from IDocument.Id and document ID parameters in IEdit calls.
	initial_doc_id	nvarchar(255)	510	If this document is a result of export from an external system (another Kofax product) the original_doc_id is set to ID of the document in that original system. This field may be used to track document history if the document life spans multiple products.
	initial_doc_class_key	int	4	Document class from classification session. Foreign key to doc_class_dim
	doc_class_key	int	4	Latest known document class IDocument.Class. Foreign key to doc_class_dim
	initial_tsf_class	int	4	Automatically recognized KTM class. IDocument.TransformationClass from classification session Foreign key to tsf_class_dim
	tsf_class	int	4	KTM class after document review. IDocument.TransformationClass from document review session. Foreign key to tsf_class_dim
	form_type_key	int	4	Last known form type IDocument.FormType. Foreign key to form_type_dim
	is_exported	bit	1	Set to true at export session close, if document was part of the completely exported batch.
	is_processing_completed	bit	1	Set to true if batch to which document belongs was marked as completed.
	is_aggr	bit	1	Used internally by ETL agent
	group_value_key	int	4	Last known KTM group value IDocument.GroupValue. Foreign key to group_value_dim
	create_date_key	int	4	Date when the document was created (via IEdit.CreateDocument, IEdit.SplitDocument). Foreign key to date_dim
	create_time_key	int	4	Time of date for document creation.
	dt_create_datetime	datetime	8	Used internally

<b>Icon</b>	<b>Name</b>	<b>Data Type</b>	<b>Max Length (Bytes)</b>	<b>Description</b>
	export_date_key	int	4	Date when the document was last exported (via IEdit.ExportDocument). Foreign key to date_dim
	export_time_key	int	4	Time of day when the document was last exported. Foreign key to time_dim
	last_proc_date_key	int	4	Date of last available document-related information. Foreign key to date_dim
	last_proc_time_key	int	4	Time of last available document-related information. Foreign key to time_dim
	dt_last_proc_datetime	datetime	8	Used internally
	last_proc_station_key	int	4	References the last station where this document was processed. Foreign key to station_dim
	last_proc_user_key	int	4	References the user the last user who processed this document. Foreign key to user_dim
	classified_date_key	int	4	Date from last classification session batch close event. Foreign key to date_dim
	classified_time_key	int	4	Time of day from last classification session batch close event. Foreign key to time_dim
	dt_last_class_datetime	datetime	8	Used internally
	reviewed_date_key	int	4	Date from the last KTM document review session batch close event. Foreign key to date_dim
	reviewed_time_key	int	4	Time from the last KTM document review session batch close event. Foreign key to time_dim
	dt_last_review_datetime	datetime	8	Used internally
	review_user_key	int	4	User from the last KTM document review session. Foreign key to user_dim
	product_key	int	4	Foreign key to product_dim
	etl_job_key	int	4	Used internally

Icon	Name	Data Type	Max Length (Bytes)	Description
	path_key	bigint	8	Internal unique key for the table path_dim
	in_root_folder_position	int	4	Document's number counting from the first one relative from the root folder.
	in_sub_folder_position	int	4	Document's number counting from the first one relative from the nearest subfolder.
	display_name	nvarchar(255)	510	Last known calculated document display name from <code>IDocument.DisplayName</code> parameters in <code>IEdit</code> calls.
	is_sys_classified	bit		1 if document was system classified. Value is set to: <code>IDocument.Is_SystemClassified</code>
	in_root_fold_pos_sys_clsf	int	4	Document's number counting from the first one relative from the root folder at the last time document was system classified.

## page\_dim

This table holds the latest known status of each individual page. The ETL agent updates it when processing batch close events and page-related batch edit actions.

Icon	Name	Data Type	Max Length (Bytes)	Description
	page_key	bigint	8	Unique key
	page_id	nvarchar(255)	510	Page ID (Natural key) From <code>IDocument.Id</code> and document ID parameters in <code>IEdit</code> calls.
	original_page_id	nvarchar(255)	510	If this page is a result of export from an external system (another Kofax product) the <code>original_page_id</code> is set to ID of the page in that original system. This field may be used to track page history if the page life spans multiple products.
	doc_key	bigint	8	Current owner document (-1 if not belonging to a document). Foreign key to <code>doc_dim</code>
	batch_key	bigint	8	Current owner batch (-1 if not belonging to a batch). Foreign key to <code>batch_dim</code>
	dt_last_proc_datetime	datetime	8	Used internally

Icon	Name	Data Type	Max Length (Bytes)	Description
	last_proc_date_key	int	4	Date when the page was last processed. Foreign key to date_dim
	last_proc_time_key	int	4	Time when the page was last processed. Foreign key to time_dim
	product_key	int	4	Foreign key to product_dim
	dt_create_datetime	datetime	8	Page creation date and time (First invocation of ScanPage or CopyDocument that indicates creation of this page.)
	create_date_key	int	4	Page creation date Foreign key to date_dim
	create_time_key	int	4	Page creation time Foreign key to time_dim
	initial_tsfclass_key	int	4	Automatically recognized KTM class IDocument.TransformationClass from classification session Foreign key to tsfclass_dim
	tsfclass_key	int	4	KTM class after document review IDocument.TransformationClass from document review session. Foreign key to tsfclass_dim
	classified_date_key	int	4	Date from last classification session batch close event. Foreign key to date_dim
	classified_time_key	int	4	Time of day from last classification session batch close event. Foreign key to time_dim
	dt_last_class_datetime	datetime	8	Used internally
	reviewed_date_key	int	4	Date from last KTM document review session batch close event. Foreign key to date_dim
	reviewed_time_key	int	4	Time from last KTM document review session batch close event. Foreign key to time_dim
	dt_last_review_datetime	datetime	8	Used internally
	review_user_key	int	4	User from last KTM document review session. Foreign key to user_dim

Icon	Name	Data Type	Max Length (Bytes)	Description
	is_exported	bit	1	Set true at export session close, if page was part of the completely exported batch
	etl_job_key	int	4	Used internally
	in_doc_position	int	4	Page's number in document.
	in_doc_position_sys_clsf	int	4	Page's number in document at the time it was last system classified.
	doc_key_sys_clsf	Bigint	8	Owner document at the last time of system classification. Foreign key to doc_dim

## ta\_categories\_dim

This table defines TotalAgility categories. All other tables that need to refer a category reference this table.

Icon	Name	Data Type	Max Length (Bytes)	Description
	category_key	bigint	8	Unique key
	category_id	nvarchar(255)	510	TotalAgility category ID
	category_name	nvarchar(255)	510	Category name
	dt_last_change	datetime		Time of the latest record change
	etl_job_key	int	4	Used internally

## ta\_classif\_group\_dim

This table defines classification groups. All other tables that need to refer a classification group reference this table.

Icon	Name	Data Type	Max Length (Bytes)	Description
	classification_group_key	bigint	8	Unique key
	classification_group_name	nvarchar(255)	510	Group name
	classification_group_id	nvarchar(255)	510	Group id
	classification_group_version	nvarchar(255)	510	Group version
	classif_group_cat_key	bigint	8	Category key Foreign key to ta_categories_dim
	classification_group_id_vers	nvarchar(512)	1024	Used internally
	dt_last_change	datetime		Time of the latest record change
	etl_job_key	int	4	Used internally

## field\_column\_dim

This table holds all known table field columns. The ETL agent updates it when processing batch close events containing index field information.

Icon	Name	Data Type	Max Length (Bytes)	Description
	field_column_key	bigint	8	Unique key
	field_column_name	nvarchar(255)	510	Field column name
	etl_job_key	int	4	Used internally

## path\_dim

Icon	Name	Data Type	Max Length (Bytes)	Description
	path_key	bigint	8	Unique key
	root_folder_id	nchar(40)	80	Root folder ID (Natural key) From <code>IRootFolder.Id</code> parameter in <code>IEdit</code> calls.
	full_path_wo_closest	nvarchar(1024)	2048	Full folder path including subfolders without the closest subfolder in the following format: Root\Subfolder\SubSubfolder From <code>IFolder.DisplayName</code> parameters in <code>IEdit</code> calls.
	path_closest_subfolder	nvarchar(255)	510	Closest subfolder name. From <code>IFolder.DisplayName</code> parameters in <code>IEdit</code> calls.
	dt_last_access	datetime	8	When a document being processed by Reporting belongs to a [path_dim] record, this record's [dt_last_access] is updated.

## event\_data\_dim

Icon	Name	Data Type	Max Length (Bytes)	Description
	event_data_key	bigint	8	Unique key
	event_param1	bigint	8	
	event_param2	bigint	8	
	event_param3	bigint	8	

Icon	Name	Data Type	Max Length (Bytes)	Description
	doc_sess_snapshot_key	bigint	8	Foreign key to doc_sess_snapshot_fact

## Chapter 2

# Fact tables

Fact tables store information about actions related to capture. For example, the batch\_sess\_snapshot\_fact table stores the facts of CEBPM activities.

The fact tables contain business facts (or measures), and foreign keys that typically refer to primary keys in the dimension tables.

## Session snapshot tables

The Session snapshot tables hold information about an individual batch processing or document processing session.

### batch\_sess\_snapshot\_fact

This table holds one record for each `IBatchSession.Close` call.

Icon	Name	Data Type	Max Length (Bytes)	Description
	batch_sess_snpshot_key	bigint	8	Unique key
	batch_sess_id	nvarchar(255)	510	Used internally (foreign key to staging database table)
	mod_key	int	4	Module Foreign key to mod_dim
	station_key	int	4	Station Foreign key to station_dim
	user_key	int	4	User Foreign key to user_dim
	batch_key	bigint	8	Batch Foreign key to batch_dim
	start_date_key	int	4	Date of batch session start Foreign key to date_dim
	start_time_key	int	4	Time of batch session start Foreign key to time_dim
	end_date_key	int	4	Date of batch session close Foreign key to date_dim

Icon	Name	Data Type	Max Length (Bytes)	Description
	end_time_key	int	4	Time of batch session close Foreign key to time_dim
	dt_end_datetime	datetime	8	Full date and time of batch session close call.
	session_type	int	4	Session type This is a bit field populated from ISessionType. 1 = Recognition 2 = Validation 4 = Classification 8 = KTM Correction 16 = KTM Document Review For example, a value of 5 means this session does recognition (1) and classification (4).
	is_attended_sess	bit	1	1 if this is an attended session From ISessionType.IsAttended
	batch_state	int	4	Resulting batch status From State parameter in IBatchSession.Close
	sess_duration_sec	int	4	Session duration in seconds between: <ul style="list-style-type: none"><li>• ISession.OpenBatch and IBatchSession.Close</li></ul> OR <ul style="list-style-type: none"><li>• ISession.CreateBatch and IBatchSession.Close</li></ul>
	docs_created_num	int	4	Number of documents created in this session. Count of the following calls: <ul style="list-style-type: none"><li>• IEedit.CopyDocument</li><li>• IEedit.CreateDocument</li><li>• IEedit.SplitDocument</li></ul>
	docs_deleted_num	int	4	Number of documents deleted in this session. Count of the following calls: <ul style="list-style-type: none"><li>• IEedit.DeleteDocument</li><li>• IEedit.MergeDocument</li></ul>

<b>Icon</b>	<b>Name</b>	<b>Data Type</b>	<b>Max Length (Bytes)</b>	<b>Description</b>
	docs_compl_num	int	4	<p>Number of documents completed in this session.</p> <p>Count of documents with IsCompleted = true provided by the IBatchSession.Close call.</p>
	pages_scanned_num	int	4	<p>Number of pages scanned in this session.</p> <p>Count of the IEdit.ScanPage and IEdit.CopyPage calls, and the count of NewPages provided in the IEdit.CopyDocument call.</p>
	pages_replaced_num	int	4	<p>Number of pages replaced in this session.</p> <p>Count of the IEdit.ReplacePage calls.</p>
	pages_deleted_num	int	4	<p>Number of pages deleted in this session.</p> <p>Count of the IEdit.DeletePage calls, and the count of DeletedPages provided in the IEdit.DeleteDocument call.</p>
	form_types_changed_num	int	4	<p>Number of form type changes in this session.</p> <p>Count of the IEdit.ChangeFormType calls.</p>
	key_strok_num	int	4	<p>Number of keystrokes reported in this session.</p> <p>Summarizes keystroke information from each document provided in the IBatchSession.Close calls.</p> <p>If a document contains field-level keystroke information (IField.KeyStrokes), the document level keystrokes (IDocumentPerformance.KeyStrokes) are ignored.</p> <p>It is assumed that keystrokes are reported either per field or per document, but not on both levels.</p>
	conf_classes_changed_num	int	4	<p>Number of confident KTM classes changed in this session.</p> <p>Count of the IEdit.ChangeConfidentClass calls.</p>
	sugg_classes_accepted_num	int	4	<p>Number of suggested KTM classes accepted in this session.</p> <p>Count of the IEdit.AcceptSuggestedClass calls.</p>
	sugg_classes_changed_num	int	4	<p>Number of suggested KTM classes changed in this session.</p> <p>Count of the IEdit.ChangeSuggestedClass calls.</p>

<b>Icon</b>	<b>Name</b>	<b>Data Type</b>	<b>Max Length (Bytes)</b>	<b>Description</b>
	corr_split_points_num	int	4	Number of correct split points. Count of <code>ISeparation.CorrectSplits</code> from the <code>IBatchSession.EndDocumentReview</code> call.
	wrong_split_points_num	int	4	Number of wrong split points. Count of <code>ISeparation.WrongSplits</code> from the <code>IBatchSession.EndDocumentReview</code> call.
	missed_split_points_num	int	4	Number of missed split points. Count of <code>ISeparation.MissingSplits</code> from the <code>IBatchSession.EndDocumentReview</code> call.
	folders_split_num	int	4	Not used
	folders_merged_num	int	4	Not used
	folders_created_num	int	4	Not used
	folders_deleted_num	int	4	Not used
	docs_unclassified_num	int	4	Number of unclassified documents. Count of <code>IRules.DocumentsUnclassified</code> from the <code>IBatchSession.StartDocumentReview</code> call.
	batch_rule_failure_num	int	4	Number of batch rule failures. Count of <code>IRules.BatchRuleFailures</code> from the <code>IBatchSession.StartDocumentReview</code> call.
	batch_rule_problem_num	int	4	Number of batch rule problems. Count of <code>IRules.BatchRuleProblems</code> from the <code>IBatchSession.StartDocumentReview</code> call.
	doc_rule_failure_num	int	4	Number of document rule failures. Count of <code>IRules.DocumentRuleFailures</code> from the <code>IBatchSession.StartDocumentReview</code> call.
	doc_rule_problem_num	int	4	Number of document rule problems. Count of <code>IRules.DocumentRuleProblems</code> from the <code>IBatchSession.StartDocumentReview</code> call.
	folder_rule_failure_num	int	4	Number of folder rule failures. Count of <code>IRules.FolderRuleFailures</code> from the <code>IBatchSession.StartDocumentReview</code> call.

Icon	Name	Data Type	Max Length (Bytes)	Description
	folder_rule_proble m_num	int	4	Number of folder rule problems. Count of IRules.FolderRuleProblems from the IBatchSession.StartDocumentReview call.
	docs_num	int	4	Number of documents provided in the IBatchSession.Close call.
	pages_num	int	4	Total number of pages provided in the IBatchSession.Close call.
	ms_in_class_sep	int	4	Milliseconds spent in classification or separation during this session (IBatchSession.TimeInClassSep) Only applies to KTM modules.
	pages_added_num	int	4	Number of pages added in this session. The page might be scanned, copied or moved from another batch.
	docs_added_num	int	4	Number of documents added in this session. The document might be scanned, copied or moved from another batch.
	ta_job_id	binary(16)	16	TotalAgility Job ID
	ta_classification_group_key	int	4	References ta_classification_groups table.
🔍	etl_job_key	int	4	Used internally

## doc\_sess\_snapshot\_fact

This table holds one record for each document provided in `IBatchSession.Close` call. It contains per-document counters for this session.

Icon	Name	Data Type	Max Length (Bytes)	Description
🔑	doc_sess_snapshot_key	bigint	8	Unique key
🔑💡	batch_sess_snapshot_key	bigint	8	Foreign key to batch_sess_snapshot_fact
🔑💡	mod_key	int	4	Module Foreign key to mod_dim
🔑💡	station_key	int	4	Station Foreign key to station_dim
🔑💡	user_key	int	4	User Foreign key to user_dim
🔑💡	batch_key	bigint	8	Batch information Foreign key to batch_dim

Icon	Name	Data Type	Max Length (Bytes)	Description
	doc_key	bigint	8	Document information Foreign key to doc_dim
	end_date_key	int	4	Date when IBatchSession.Close was called.
	end_time_key	int	4	Time of day when IBatchSession.Close was called.
	dt_end_datetime	datetime	8	Used internally
	session_type	int	4	Session type. See session_type in the batch_sess_snapshot_fact table.
	key_strok_num	int	4	Number of keystrokes reported for this document either per field or per document (not on both levels).  If a document contains field-level keystroke information (IField.KeyStrokes), the document level keystrokes (IDocumentPerformance.KeyStrokes) are ignored.
	ms_in_ocr	int	4	Milliseconds spent for OCR. IDocumentPerformance.TimeInOcr
	ms_in_extr	int	4	Milliseconds spent for extraction. IDocumentPerformance.TimeInExtraction
	ms_in_class	int	4	Milliseconds spent for classification. IDocumentPerformance.TimeInClassification
	doc_sess_duration_ms	int	4	Total milliseconds spent processing this document. IDocumentPerformance.TimeSpent
	is_confly_classified	bit	1	1 if classification session and document was confidently classified. IDocument.IsConfident
	class_confidence_perc	int	4	Classification confidence in percent (only in classification session). IDocument.Confidence
	page_num	int	4	Number of elements in IDocument.Pages list.
	field_num	int	4	Only for modules providing field-level information:  Number of elements in the IDocument.Fields list.
	etl_job_key	int	4	Used internally

## Accumulative fact tables

The Accumulative fact tables accumulate information about a single batch, document or field. They summarize counters from several module sessions.

### batch\_accum\_fact

This table holds the batch-level counters aggregated during the life of a batch and describes the batch\_session\_snapshot\_fact entries for a batch.

Icon	Name	Data Type	Max Length (Bytes)	Description
	batch_accum_key	bigint	8	Unique key
	batch_key	bigint	8	Batch information Foreign key to batch_dim
	docs_num	int	4	Number of documents from last IBatchSession.Close call.
	pages_num	int	4	Number of pages from last IBatchSession.Close call.
	end_to_end_sec_num	int	4	Number of seconds between batch creation and last batch close call.
	processing_sec_num	int	4	Summarizes sess_duration_sec from the <a href="#">batch_sess_snapshot_fact</a> table.
	docs_created_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	docs_deleted_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	docs_compl_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	pages_scanned_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	pages_replaced_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	pages_deleted_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	form_types_changed_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	key_strok_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	conf_classes_changed_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.

Icon	Name	Data Type	Max Length (Bytes)	Description
	sugg_classes_accepted_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	sugg_classes_changed_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	corr_split_points_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	wrong_split_points_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	missed_split_points_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	folders_split_num	int	4	Not used
	folders_merged_num	int	4	Not used
	folders_created_num	int	4	Not used
	folders_deleted_num	int	4	Not used
	docs_unclassified_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	batch_rule_failure_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	batch_rule_problem_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	doc_rule_failure_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	doc_rule_problem_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	folder_rule_failure_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	folder_rule_problem_num	int	4	Summarizes information from the <a href="#">batch_sess_snapshot_fact</a> table.
	etl_job_key	int	4	Used internally

## doc\_accum\_fact

This table holds the document-level counters aggregated during the life of a document and describes the `doc_session_snapshot_fact` entries for a document.

Icon	Name	Data Type	Max Length (Bytes)	Description
	doc_accum_key	bigint	8	Unique key
	batch_key	bigint	8	Batch information Foreign key to <code>batch_dim</code>

Icon	Name	Data Type	Max Length (Bytes)	Description
	doc_key	bigint	8	Document information Foreign key to doc_dim
	ms_in_ocr	int	4	Summarizes information from doc_sess_snapshot_fact.
	ms_in_extr	int	4	Summarizes information from doc_sess_snapshot_fact.
	ms_in_class	int	4	Summarizes information from doc_sess_snapshot_fact.
	key_strok_num	int	4	Summarizes information from doc_sess_snapshot_fact.
	page_num	int	4	page_num from last doc_sess_snapshot_fact record.
	field_num	int	4	field_num from last doc_sess_snapshot_fact record.
	is_confly_classified	bit	1	Record of last classification session from doc_sess_snapshot_fact.
	class_confidence_per_c	int	4	Record of last classification session from doc_sess_snapshot_fact.
	etl_job_key	int	4	Used internally

## field\_accum\_fact

This table holds summary information about the single index fields in a document. The combination of document ID, field name and row number is the unique key.

The ETL agent deletes old entries from this table after a configurable time.

Icon	Name	Data Type	Max Length (Bytes)	Description
	field_accum_key	bigint	8	Unique key
	batch_key	bigint	8	Batch information Foreign key to batch_dim
	doc_key	bigint	8	Document information Foreign key to doc_dim
	field_key	int	4	Field name Foreign key to field_dim
	field_column_key	bigint	8	Foreign key to field_column_dim for table fields. -1 for non-table fields.
	group_value_key	int	4	Group value Foreign key to group_value_dim
	dt_last_recog	datetime	8	Time of last recognition session.

Icon	Name	Data Type	Max Length (Bytes)	Description
	dt_last_valid	datetime	8	Time of last validation session.
	dt_last_correc	datetime	8	Time of last correction session.
	dt_last_review	datetime	8	Time of last document review session.
	dt_last_class	datetime	8	Time of last classification session.
	dt_last_sess	datetime	8	Time of last <code>IBatchSession.Close</code> with information about this field.
	field_tbl_index	int	4	Table index (if this is a table field) <code>IField.RowId</code>
	field_recog_status_key	int	4	<p>Field recognition status  This field is initialized to 5. In the <u>validation session</u>, the value is set according to <code>IField.IsValid</code> and <code>IField.IsChanged</code>.</p> <ul style="list-style-type: none"> <li>• A field is valid if <code>IField.IsValid</code> is true.</li> <li>• A field is correct if <code>IField.IsChanged</code> is false.</li> </ul> <p>Foreign key to <code>field_recog_status_dim</code></p>
	key_strok_num	int	4	Total keystrokes into this field Sum of <code>IField.KeyStrokes</code> for this field
	conf_corr_chars_num	int	4	Not used.
	conf_incorr_chars_num	int	4	Not used.
	unconf_corr_chars_num	int	4	Not used.
	unconf_incorr_chars_num	int	4	Not used.
	field_value	nvarchar(1024)	2048	Current field value. Last <code>IField.Value</code> for this field.
	original_value	nvarchar(1024)	2048	Automatically recognized field value. <code>IField.Value</code> from the last recognition session.
	field_confidence_perc	int	4	Confidence of field recognition. <code>IField.Confidence</code> from the last recognition session
	chars_recognized_num	int	4	Number of automatically recognized characters. Length of <code>original_value</code>

Icon	Name	Data Type	Max Length (Bytes)	Description
	conf_chars_num	int	4	Not used.
	chars_validated_num	int	4	Number of characters after validation session. Length of <code>IField.Value</code> from the last validation session
	is_deleted	bit		Signals whether the field was deleted for rows in table fields.
	etl_job_key	int	4	Used internally
	is_sys_extracted	bit	1	1 if document was system classified. Value is set to: existing value with bit AND operation with the value from <code>IField.IsSystemExtracted</code>
	extr_batch_sess_key	int	4	Last extraction batch session key. Foreign key to <code>batch_sess_snapshot_fact</code>
	extr_manual_sess_key	int	4	Last batch session key where field was manually changed. Foreign key to <code>batch_sess_snapshot_fact</code>

## Other fact tables

### batch\_field\_fact

This table is updated at `IBatchSession.Close` and contains batch field information. It holds one record for each combination of batch, batch field name and batch field value.

Icon	Name	Data Type	Max Length (Bytes)	Description
	batch_field_key	bigint	8	Unique key
	batch_key	bigint	8	Batch information Foreign key to <code>batch_dim</code>
	field_key	int	4	Batch field name Foreign key to <code>field_dim</code>
	field_value	nvarchar(1024)	2048	Batch field value <code>IBatchField.Value</code>
	etl_job_key	int	4	Used internally

## object\_audit\_fact

This table contains batch-edit information including batch-level actions created internally by API (batch create, batch delete, batch export, batch open, batch close) as well as explicit calls to the IEdit interface.

There is one record for each individual audited event. Existing records are never updated.

Icon	Name	Data Type	Max Length (Bytes)	Description
	object_audit_key	bigint	8	Internal unique key
	batch_key	bigint	8	Batch information Foreign key to batch_dim May be -1 if no batch involved
	folder_key	bigint	8	Not used
	doc_key	bigint	8	Document information Foreign key to doc_dim May be -1 if no document involved
	page_key	bigint	8	Page information Foreign key to page_dim May be -1 if no page involved
	date_key	int	4	Event date Foreign key to date_dim
	time_key	int	4	Event time Foreign key to time_dim
	user_key	int	4	User Foreign key to user_dim
	mod_key	int	4	Module Foreign key to mod_dim
	station_key	int	4	Station Foreign key to station_dim
	machine_key	int	4	Machine Foreign key to machine_dim
	object_action_key	int	4	Action type Foreign key to object_action_dim
	reject_note_key	int	4	Reject note (or -1 if no reject action) Foreign key to reject_note_dim
	export_mod_key	int	4	Export connector (or -1) Foreign key to mod_dim
	is_interactive	bit	1	1 for interactive actions IEdit.IsInteractive

Icon	Name	Data Type	Max Length (Bytes)	Description
	sequence_num	int	4	Sequential action number within the session
	comments	nvarchar(255)	510	Event comment
	etl_job_key	int	4	Used internally
	event_data_key	uniqueidentifier	16	Additional event data Foreign key to event_data_dim

## field\_changes\_fact

This table contains all changes that are done manually in the fields.

Icon	Name	Data Type	Max Length (Bytes)	Description
	field_change_key	bigint	8	Unique key
	field_key	bigint	8	Key to [field_dim] entry which represents the field.
	field_column_key	bigint	8	Key to [field_column_dim] entry which represents the column in table fields.
	field_tbl_index	int	4	Number of rows in the table field.
	object_audit_key	bigint	8	Key to [object_audit_fact] table entry which represents manual fields change event ([object_action_key] value for it is equal to 60001).
	doc_sess_snapshot_key	bigint	8	Key to document session. Calculated from IDocument.Id parameter and SessionId parameter in IEdit calls.
	field_new_value	nvarchar(1024)	2048	String representation of the new value of field which was assigned with the change .
	field_old_value	nvarchar(1024)	2048	String representation of the old value of field which was before new was assigned with the change.
	etl_job_key	int	4	Used internally
