Chapter 1

About Kofax SignDoc technical specifications

Kofax SignDoc is an enterprise level e-signature product family, which may either be utilized as part of an integration, or as a standalone application. Due to its integration options, it provides a starting point for any digital transformation initiative, and provides a broad range of e-signing capabilities. Kofax SignDoc supports all signing scenarios in any location (in-branch, in-store, in-office, in-field, at home), assisted, or non-assisted as self-service.

The technical specifications in this document are specific to the following components of SignDoc 3.1.0:

- SignDoc Standard 3.1.0
- SignDoc Web 3.1.0
- SignDoc SDK 5.0.1
- SignAlyze 2.0.0
- SignDoc Device Support 3.0.0
- SignDoc Assistant App 1.0.0

This document lists the required amount of memory and disk space. You must meet these requirements to support your SignDoc system. These requirements specifically relate to SignDoc and do not include any amount of memory or disk space you require for the operating system, environment, or other software that runs on the same computer.

Chapter 2

Product requirements

SignDoc Servers

This section describes the software that runs on a server and references to requirements for SignDoc Standard server and SignDoc Web server. Requirements that only apply to one component are indicated as such.

Specification	Description
Hardware	<p>A server class system is required to run SignDoc servers in an enterprise environment.</p> <p>SignDoc servers can be operated on x86_64 architectures (Intel / AMD CPUs).</p> <p>The processing power of each physical server directly affects performance. As a minimum requirement, a quad core processor running at 2 GHz should be used.</p> <p>Memory: Minimum 16 GB RAM, recommended 32 GB.</p> <p>Free disk space: Minimum 100 GB or more hard disk space.</p>
Accessibility	<p>1 GB network minimum, configured at full duplex, is required for this server and the database server.</p> <p>If the system is installed behind a firewall, HTTP or HTTPS ports should be open within firewalls that restrict client access across your WAN or LAN.</p> <p>Certain hardware is prone to networking issues when TCP offloading is enabled. If you experience frequent networking issues, or use a Virtual Machine (VM), disable TCP offloading. You must disable this setting at all levels, including the host operating for both the Virtual Machine and its host, and NIC; and all machines within the SignDoc server system including the database server. Refer to documentation from your vendor for instructions on how to disable TCP offloading.</p>

Virtual System	You can deploy SignDoc server components on VMs running on operating systems as specified above.

SignDoc Clients

This section describes what users need on the client side to create and maintain accounts as well as to create and maintain signing packages in SignDoc Standard. It describes also what users need to sign or review documents using SignDoc Standard or SignDoc Web.

Requirements that apply to all clients of a web application are summarized in the [General requirements](#) section. Particular requirements that apply only to individual components are listed in a separate section.

General requirements

This section describes requirements that apply to all SignDoc clients not operating on mobile devices.

Specification	Description
Hardware	We recommend a standard office desktop computer with at least 2 GB of RAM (4 GB RAM is recommended). There are additional requirements for client applications when native handwritten signatures have to be captured.

Specification	Description

SignDoc Standard Manage Client and Administration Center

This section describes additional requirements and details for the client application to create and maintain accounts as well as to create and maintain signing packages using SignDoc Standard.

Specification	Description
Accessibility	We recommend an Internet connection capable of 100 Mbps.

Specification	Description
Mobile operating system	<p>We recommend administrating SignDoc Standard via desktop computer.</p> <p>i When using a mobile device for administration, we recommend a medium size device (tablets, 768 px and up).</p>
Languages supported	<p>GUI available in:</p> <ul style="list-style-type: none"> Dutch, English, French, German, Italian, Japanese, Portuguese (Brazil), Simplified Chinese, Spanish <p>i Other languages are in the responsibility of the customer.</p>

SignDoc Signing Client

This section describes additional requirements and details for the client web applications to sign or review documents. Deviations for the legacy SignDoc Web Browser Client are covered in the section [SignDoc Web - Browser Client](#). Requirements for the SignDoc Mobile App are treated in section [SignDoc Web - SignDoc Mobile Client](#).

Specification	Description
Compatible Hardware	<p>For desktop computers, we support devices that are compatible with the supported browser technology and supported client operating system as listed below as well as 10 GB or more free hard disk space for installing software for native handwritten signature capture.</p> <p>For mobile devices, we support devices that are compatible with the supported mobile operating system as listed below using device default (standard) browser technology.</p> <p>i On mobile devices, the handwritten signature capturing is supported with a minimum of HTML5 capture.</p>
Accessibility	<p>The browser-based signing clients require an Internet connection capable of the equivalent bandwidth of a 3G/LTE connection.</p> <p>Support mobile devices with mobile network or Wi-Fi network connectivity.</p>
Mobile Operating Systems	<p>Apple OS</p> <ul style="list-style-type: none"> iOS 15, 14, 13 (tested version: 14.9.1) <ul style="list-style-type: none"> iOS 12, 11, 10, 9.3 are deprecated iPadOS 15, 14, 13.1 <p>Google Android OS</p> <ul style="list-style-type: none"> 12.x, 11.x, 10.x, 9.x, 8.x (tested version: 12.0) <p>Microsoft Windows OS</p> <ul style="list-style-type: none"> Windows 10 (governed by Microsoft Modern Policy)

SignDoc SDK

SignDoc SDK enables the creation of applications that process SignDoc documents, rendering as images, signing, and verifying PDF and TIFF documents. It provides functionality to capture and verify handwritten signatures on mobile devices, or from specific USB signature pads. The technical specifications in this section are specific to SignDoc SDK 5.0.1.

SignDoc SDK is delivered as 64-bit package. For selected handwritten signature capturing components, a 32-bit version is available upon request.
